“Natural Beauty in Unlimited Design.”

Aggregates from Chancellor Co., Inc. include loose gravel, crushed stone, and washed pebbles in varying sizes, shapes and colors. Most angular aggregates are machine-crushed and rounded aggregates were tumbled smooth over time in rivers and streams and screened to various size ranges.

Use aggregates for mulching, erosion control and other landscaping projects. Several options are offered as a foundation material to install flagstone and similar products for walkways including rock dust and sand.

We sell larger boulders and others size of natural stones to expand your design options.

Natural Sand Natural River Sand

USES:

Horse Rings, Bedding Material, Playgrounds, Private Concrete

PHYSICAL CHARACTERISTICS:

Origin: Virginia

Geology: Quartzite

Color Range: Over all - Tan and Light Brown

Finish: Naturally Tumbled and Screened

Dimensions: Screened minus 3/16"

Coverage: Approximately .85 of a ton of material will cover an area 10 ft x 10 ft at 2" depth.

Weight: Aggregates are sold by the ton (2000 lbs)
(Approximately 100 lbs per cubic foot)

Notes:

- » The brown Sand is a true natural river stone formed by years of water abrasion. It offers a color range of brown and light tan. This sand is a river-tumbled quartzite from the Blue Ridge mountain range that is quarried from alluvial fans.
- » This product will not compact it will stay loose.
- » The sand is a true Natural sand meaning that it has not been broken by any mechanical means only screened to size.
- » This product is used Horse Rings, in barns for bedding, play ground sand boxes, under vinyl swimming pools and volleyball courts and river beach areas.
- » This Material has been used by the Virginia Horse Center for over 20 years.

The above information is provided to list information commonly asked about the material. This is only a general guideline and provided with the understanding that this material will vary because it is Natural state. No testing or gradation has been done.
